

CraftBot XL

The CraftBot XL print height is very different from most desktop FDM (Fused Deposition Modeling) printers. Thanks to its precise and robust mechanics, it does not bother printing objects up to 440mm high, so the top layer will be as good as the first layers.

The CraftBot XL also delivers the well-known quality and repeatability, so with our 10pcs printer, we can handle even large numbers of orders in excellent quality with short deadlines.

Main technical parameters

Technology	Fused Deposition Modeling
Workspace	300 x 200 x 400 mm
Layer thickness	0,05 mm
Material	PLA
Color of product	optional
